Imagine Connectivity Today

page 1

Imagine IPS is not your average Internet Service Provider. Established in 1999, we have a long history of the highest quality services and excellent customer satisfaction. We ensure that you are connected when and where you need it. We are a premium Internet and IT Support services supplier that offers a personable service in getting connected with Wireless Internet, telephony via our VoIP services as well as exceptional onsite support and expert technical support when you need it.

We currently provide the following services in Johannesburg, Cape Town, and Durban:

Internet

IMAGINE a wide range of Internet connectivity options including Wireless Broadband, dedicated Fibre, LTE/3G and ADSL.

Networking

IMAGINE a comprehensive solution for your network including analysis, maintenance and management.

Consulting

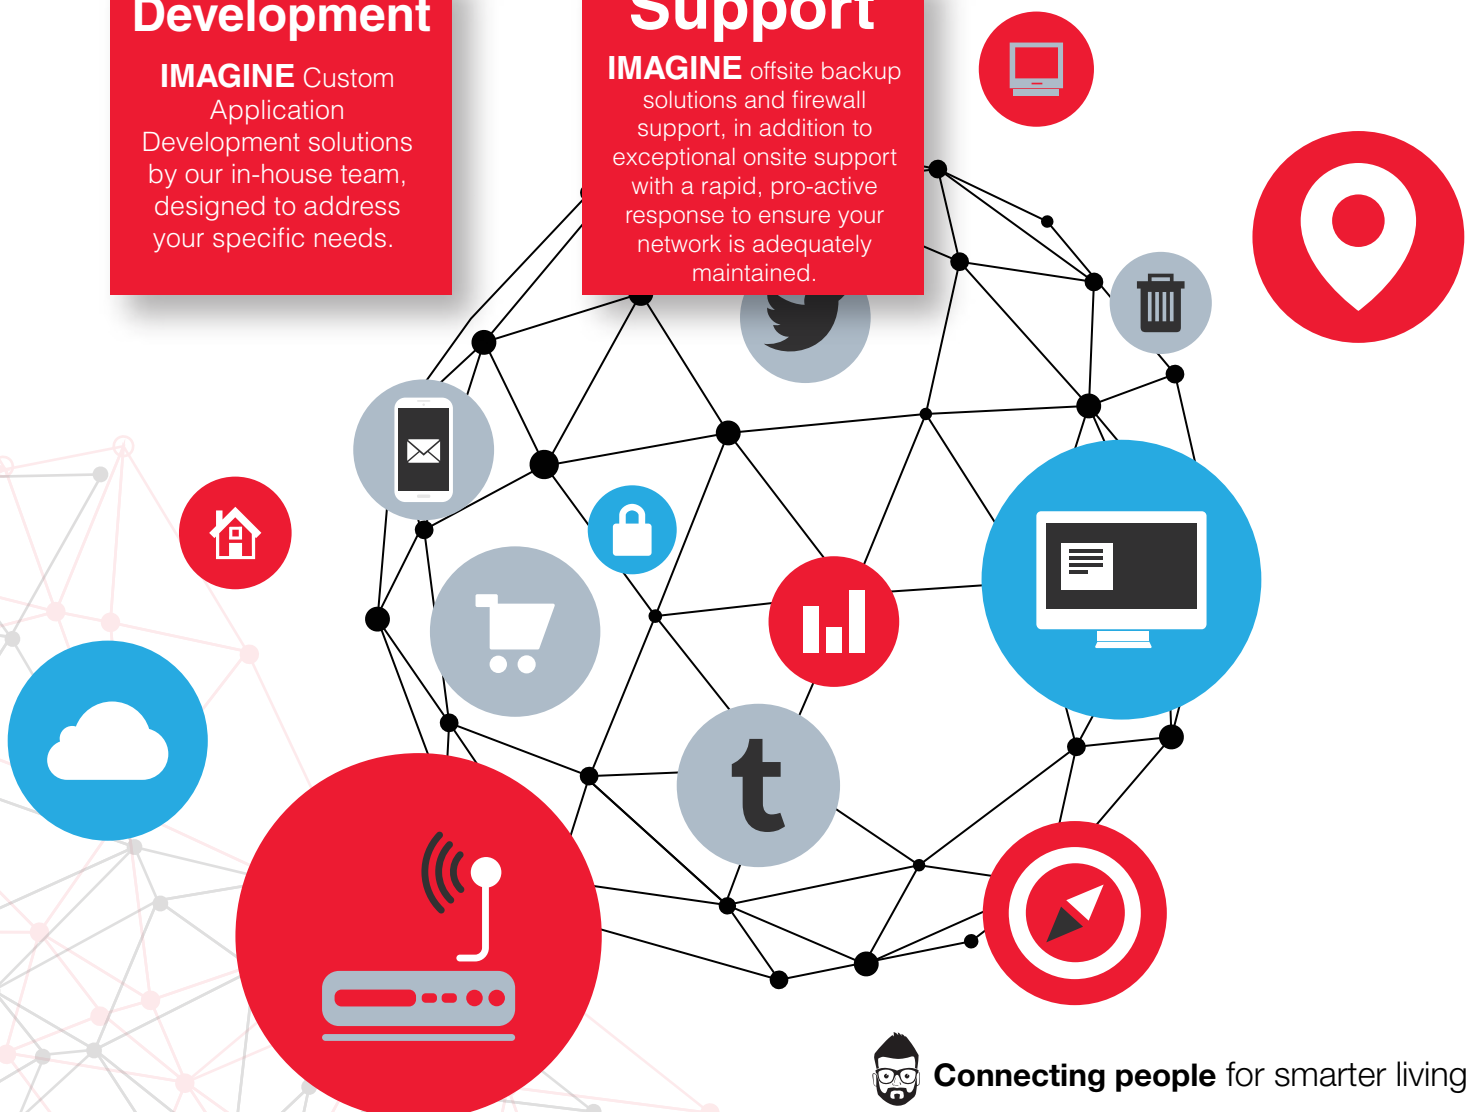

IMAGINE expert network audits, performance measurements and detailed recommendations for improvements.

Development

IMAGINE Custom Application Development solutions by our in-house team, designed to address your specific needs.

Support

IMAGINE offsite backup solutions and firewall support, in addition to exceptional onsite support with a rapid, pro-active response to ensure your network is adequately maintained.

Flexible. Reliable. Efficient.

page 2

Imagine IPS hosts several core voice networks for large VoIP carriers and hosts the infrastructure of several smaller ISPs. We hold both I-ECS and I-ECNS licences.

Our qualifications include:

- Member of ISPA (Internet Service Providers Association)
- Member of WAPA (Wireless Access Provers Association)
- Microsoft Certified Partner
- Juniper Certified Partner
- BBBEE Accredited

Imagine... Our Mission

We aim to provide the best possible solutions without compromising on quality and service.
We connect people for smarter living.

Imagine... Our Vision

We are a premium brand for IT and Internet services – custom fit solutions to meet your every IT need.

Connecting people for smarter living

Not your ordinary ISP

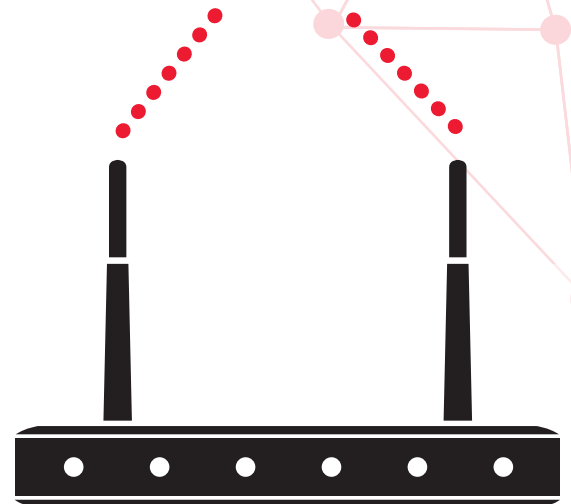

page 3

Imagine IPS takes the hassle out of IT structure and Telecoms by providing Internet connection options to ensure that you get all of your connectivity and support solutions from a single provider.
We customise our solutions to suit your needs.

Wireless Internet: Are you equipped with the technological edge yet?

Imagine IPS provides Unlimited Wireless Internet for your home and business to give you a viable Internet connection option without relying on landline installation. Our network coverage is rapidly expanding to include new sites monthly that have previously been left behind by traditional Internet Service Providers. Our networks are built by our network engineers, monitored and maintained to ensure no reliance on third party networks.

Wireless Internet connectivity gives you all the benefits of being connected via landline without the usual hassles that go along with it. The wireless connection relies on direct line-of-sight with a tower in your area, these as well as other details are determined when we do a free site survey at your home or business.

Voice: Telephony Systems for your business that work when you do

page 4

Imagine IPS offers Voice over IP for Business and Residential clients in an effort to assist you in saving up to 40% in call costs and provides many other benefits that allow you to leave the world of traditional telephony behind and to join the VoIP (Voice over Internet Protocol) revolution.

Our VoIP solutions are billed on per second billing from the very first second of a call to ensure you only pay for what you use.

Already have a geographic number that you would like to keep? No problem. We ensure number portability with our VoIP solutions.

Our VoIP solutions put you in charge of your telephone systems by allowing you to access your call detail records at any time. Our VoIP system is often compatible with existing PABX systems, however you can easily move across to a new generation hosted PABX system in order to reduce costs.

Support: Network Security, Network Health, Data Protection and End-user Support.

Onsite Support

Imagine IPS offers excellent onsite technical support to our clients to ensure technical issues are predicted and resolved along with potential threat removal. Minimise the downtime of your network and increase the productivity of your business. We offer a hands-on solution for all your IT Support.

Technical Support

Imagine IPS offers technical support on all the products we sell. A basic level of support is given telephonically to ensure the client is assisted in troubleshooting the problems they might be experiencing.

More products and services will be added to our offering soon!
